Outdoor power inverter design

Overview

What is a solar inverter used for?

This Inverter is very suitable for solar power systems, wind power generation systems, wind and solar hybrid generation systems. The inverter can supply AC power to all kinds of electric equipment, air conditioners, electric motors, refrigerators, fluorescent lights, televisions, electric fans and other industrial power supply.

What is inverter design?

An inverter designing involves various topologies of power circuits and the methods to control the voltage. The most concentrated part of the inverter is its waveform generated at the output. For the purpose of filtering the waveform inductors and the capacitors are used. In order to reduce the harmonics from the output low pass filters are used.

What is Sandi SDP series pure sine wave inverter?

SANDI SDP series Pure Sine Wave Inverter is the one of the most advanced technology DC to AC conversion products in the world, it's suitable use for areas without electricity, providing a complete power solution for strict demand applications.

What is the input voltage range for solar/wind system?

Input voltage range can be selected from 100-300V, 200-500V or 500-850V, suitable for solar/wind system without backup batteries, it can save many cost and maximization use the solar/wind energy. 11, Using SVPWM space vector algorithms, high conversion efficiency, high instantaneous power and low losses conversion efficiency up to 94%.
