

# **Outdoor power station factory in Sudan**

## Overview

---

Can solar energy be used in Sudan?

Research and projects on solar energy in Sudan have primarily concentrated on solar PV systems, with relatively limited focus on solar thermal energy. Nevertheless, there are some studies that have explored power generation using CSP technologies.

Where is the best place to harvest solar energy in Sudan?

A study by Fadlallah and Serradj assessed the monthly average solar radiation across 21 locations in Sudan, as shown in Figure 11, identifying Kutum as the most favorable site for solar energy harvesting, followed by Wawa, Dongola, and Al-Goled. Solar potential map of Sudan . Average monthly solar radiation in Sudan .

What is the energy supply in Sudan?

The energy supply in Sudan is primarily derived from crude oil, hydroelectricity, biomass, and renewable energy sources such as wind, solar, and geothermal energy. As illustrated in Figure 2a, biomass is the largest contributor, accounting for 52% of Sudan's total energy consumption.

How many solar plants are there in Sudan?

The government has identified six additional sites capable of producing a total of 2197 MW, though no significant new installations have been recently initiated. As part of the Sunbelt region, Sudan possesses substantial solar energy potential. However, the grid-connected capacity remains limited to the 5-MW El Fasher solar PV plant.
