

# **Price Inquiry for Two-Way Charging Using Folding Containers in Shopping Malls**

## Overview

---

Do shopping malls need EV charging infrastructure?

In an era where electric vehicles (EVs) are becoming the cornerstone of urban transportation, the need for robust and efficient EV charging infrastructure in shopping malls is more pronounced than ever. Shopping malls, being hubs of consumer activity, are strategically positioned to serve the growing number of EV users.

Are EV charging stations a value-added service for shopping malls?

The availability of EV charging stations is not only a value-added service for visitors but also a critical determinant of a mall's competitiveness in attracting eco-conscious shoppers. As we look towards 2025, the landscape of commercial EV charging stations in shopping malls is poised for significant advancements.

Why do shopping malls need fast chargers?

Fast chargers can deliver an 80% charge in as little as 20 minutes, providing a significant advantage in high-traffic areas like shopping malls where customers may not spend extended periods. Advanced load management systems enable shopping malls to optimize energy use by balancing load demand, thereby reducing downtime and maintenance costs.

What is bidirectional charging?

Bidirectional charging, also referred to as two-way charging, is a cutting-edge technology that enables electric vehicle batteries to both receive and deliver energy to and from an external power source. This marks a significant improvement over the conventional charging process, where EVs can only receive energy from an external power source.
