Prices of bifacial solar panels in London

Overview

As of 2025, Bifacial solar panels in the UK cost an average of £5,500 - £6,600 for a 4kW system and can save about £860 on your yearly electricity bills. How much do bifacial panels cost in the UK?

For the average home in the UK, bifacial panels in the UK tend to cost between £9,900 - £11,000, including installation. Generally, because of their advanced design and specialised equipment, bifacial panels prices are around 10% higher than the cost of solar panels with a monofacial design.

How much does a bifacial solar system cost?

Bifacial panels have transparent front and back sides that can both capture solar energy for your home. The average 4kW bifacial system will cost £5,500 - £6,600, and could save you £860 per year on your electricity bills. Bifacial panels are highly efficient at capturing solar energy, potentially increasing your solar panels' output by up to 30%.

Why should you choose bifacial solar panels in the UK?

ESE Solar offers a selection of bifacial solar panels to the UK market that comes with competitive pricing, excellent product specifications, and reliable installation services. As the world continues to shift towards sustainable energy, choose bifacial panels to help you play your part in the world's transition towards a greener future.

What are bifacial solar panels?

One of the main advantages of a bifacial panel is its increased efficiency. Bifacial solar panels work to capture sunlight from both sides of the panels, increasing total energy generation numbers compared to their monofacial counterparts. As a result, bifacial solar modules are more cost-effective when it comes to efficiency levels.
