

## Overview

---

How much does a lithium battery cost for an RV?

RV lithium batteries aren't cheap. Most lithium batteries for RV use cost between \$700-\$1,200, which is a bit hit to a camping budget. A standard deep-cycle lead-acid battery typically costs about \$125, which is much more reasonable for the average RV owner.

Are lithium batteries good for RVs?

The design of lithium batteries made for RVs is a type the industry calls lithium iron phosphate battery, or LiFePO<sub>4</sub>, which is much more stable so they won't overheat, catch on fire, or explode even if you are involved in an accident during travel.

What are the pros and cons of lithium batteries?

We run through 12 pros and cons of lithium batteries. LifePO<sub>4</sub> (lithium) batteries will release energy at any level required in RV use. Given adequate inverter capacity, virtually all your RV's electrical appliances can be run simultaneously if needed.

Are LiFePO<sub>4</sub> batteries suitable for RVs?

While less of an issue in the large-scale solar area, LiFePO<sub>4</sub> batteries suitable for RVs are stocked only by a few specialised battery vendors, and by some suppliers of battery charging equipment. There is a substantial lack of general expertise in this area - including by many auto electricians and battery vendors in general.
