

# Rated capacity of solar inverter

## Overview

---

How big should a solar inverter be?

Generally, it's recommended to size the inverter to 80-100% of the DC system's rated capacity. Before determine the inverter size, the most important thing is to calculate your average daily power consumption (kWh) and calculate your solar panel array size to match your power consumption. You could follow our to make this estimation.

Why should you choose a solar inverter rated in kW?

Inverters must handle peak solar input, battery charging, and load output—all at once. Choosing an inverter rated in kW (not just kVA) gives you a clearer view of real usable power. This prevents undersizing and keeps your solar-storage system running efficiently.

What are solar inverter specifications?

She takes part in environmental conservation by recycling and avoiding single-use plastic. Solar inverter specifications include input and output specs highlighting voltage, power, efficiency, protection, and safety features.

What is a recommended inverter power range?

By inputting your panel's rated power and number of panels, the calculator produces a recommended inverter power range that aligns with 80-100% of your system's total DC capacity. This approach ensures that your inverter is neither under-sized—risking energy losses and performance issues—nor over-sized, which can lead to unnecessary costs.
