## Overview

---

Can subregional electricity markets connect power systems across borders?

Figure 1 presents three proposed subregional electricity markets in Southeast Asia that could connect power systems across borders. In this case, effectively designed markets would support increased integration of renewables, energy security, and grid reliability and resilience in the Association of Southeast Asian Nations (ASEAN) region.

What is cross-border power trade?

Depending on the form, cross-border power trade can involve different degrees of coordination between system operators and utilities. A fully integrated wholesale market, for example, might cover a number of interconnected countries served by a single system operator.

Can cross-border power trade support resilience?

Cross-border power trade can support goals such as improved grid resilience, increased energy access, reaching renewable energy targets, and increasing economic development. This fact sheet explains how cross-border trade can be a potential technical solution to support resilience.

Why do we need a regulatory framework for cross-border electricity trade?

A regulatory framework is necessary to ensure all types of cross-border electricity trade between two or more countries are clearly defined, framed, and protected. Europe has experienced an increase in cross-border electricity transmission capacity and flows over the past few decades, partly due to the European internal energy market.
