Overview

What is a container substation?

Home / Container substations, also known as mobile or prefabricated substations, are an increasingly popular solution in the field of electrical power distribution.

Can a rule-based dynamic container stacking model determine optimal yard bays?

4. Rule-Based Dynamic Container Stacking (RBDCS) Model Development As explained under subsection 2.5, in this study we suggest a real - time RBDCS model to determine optimal yard bays for incoming containers considering several limitations of existing DCS models.

How rbdcs model ensures the yard segregation policies of container terminals?

The developed RBDCS model ensures the yard segregation policies of container terminals since the knowledge base is developed considering yard segregation strategies. 20' containers have more tendency to minimize the container handling costs using the proposed RBDCS model.

What is rule-based dynamic container stacking (rbdcs)?

The paper introduces a Rule-Based Dynamic Container Stacking (RBDCS) model which contains a three-step methodology. The developed RBDCS model determines yard locations in real-time at the point of container arrival while minimizing the container handling cost and considering uncertainty.
