

Single-charge and single-discharge industrial energy storage power station

Overview

What is a commercial and industrial energy storage system?

Product can be used in any parallel connection to meet different power and energy requirements and can be flexibly deployed on-site. A commercial and industrial energy storage system from HyperStrong reduces the cost of electricity consumption and stabilizes your business's power supply.

What are battery storage power stations?

Battery storage power stations are usually composed of batteries, power conversion systems (inverters), control systems and monitoring equipment. There are a variety of battery types used, including lithium-ion, lead-acid, flow cell batteries, and others, depending on factors such as energy density, cycle life, and cost.

What is a commercial battery storage system?

Our commercial battery storage systems utilize demand charge management, dynamic capacity expansion, and demand-side response to improve commercial and industrial energy storage and enhance new energy distribution. Project features 5 units of HyperStrong's liquid-cooling outdoor cabinets in a 500kW/1164.8kWh energy storage power station.

When does the energy storage system choose not to discharge?

When the grid price is in the valley period, such as 15:00–18:00, the energy storage system chooses not to discharge regardless of the power shortage. Thereafter, the energy storage system initiates the discharging mechanism when the grid price is in the peak period starting period of 18:00.
