

# Solar container lithium battery pack converted to DC fast charging

## Overview

---

What is a solar 30kW DC-DC EV charger?

The all new and innovative solar 30kW DC-DC EV charger with DC input and MPPT functionality is a highly advanced and efficient solution for providing EV charging possibilities at sites with installed solar panels and no AC grid available.

What is solar step-up power converter (ssupc)?

The innovative battery charging control strategy introduced in this study revolutionizes the DC charging process for electric vehicle batteries. A standout feature of this system is the voltage gain of the solar step-up power converter (SSUPC), which is twice that of conventional DC boost converters.

Can a solar panel EV charger charge a car?

Being possible to output voltage of 1000V, this solar panels fed EV charger can charge any vehicle on the market – low-voltage architectures, high-voltage architectures, and even buses and trucks. The regular fast EV charger converts the AC grid energy to DC power while EV batteries operate on direct current (DC).

Can a solar step-up power converter be optimized for electric vehicle charging?

This study proposes an innovative control strategy based on a quadratic equation derived from a core battery charging model. This strategy is applied to a solar step-up power converter (SSUPC), which is specifically optimized for electric vehicle charging.
