What are polycrystalline and monocrystalline solar panels?

Polycrystalline and monocrystalline solar panels are both made from a arrangement of silicon cells. These types of silicon solar panels are known in the industry as 'mono' and 'poly' panels. In 2020, almost every consumer will use one of these 2 kinds of crystalline solar panels.

Why is monocrystalline silicon used in solar panels?

Monocrystalline silicon is used to manufacture high-performance photovoltaic panels. The quality requirements for monocrystalline solar panels are not very demanding. In this type of boards the demands on structural imperfections are less high compared to microelectronics applications. For this reason, lower quality silicon is used.

What is monocrystalline silicon?

Monocrystalline silicon consists of silicon in which the crystal lattice of the entire solid is continuous. This crystalline structure does not break at its edges and is free of any grain boundaries. Monocrystalline silicon can be prepared as: It can also be doped by adding other elements such as boron or phosphorus.
