# **Solar panel 630 power generation per piece**

## Overview

---

How much power do solar panels produce?

About 97% of solar panels quoted on the EnergySage Marketplace in 2025 are 400 to 460 watts—expect to see panel outputs in this range in your quotes. Your panels' actual output will depend on your roof's shading, orientation, and hours of sun exposure. The efficiency and size of your solar panels drive their power output.

How much energy does a 400 watt solar panel produce?

A 400-watt panel can generate roughly 1.6-2.5 kWh of energy per day, depending on local sunlight. To cover the average U.S. household's 900 kWh/month consumption, you typically need 12-18 panels. Output depends on sun hours, roof direction, panel technology, shading, temperature and age.

Which solar panel has the highest output?

We looked through thousands of quotes on the EnergySage Marketplace and found that VSUN offers the solar panel with the highest output for homes: 490 watts and 22.65% efficiency. \*This table only includes residential solar panel models with over 21% efficiency from brands that are quoted in the EnergySage Marketplace.

How many Watts Does a solar panel produce in 2025?

About 97% of home solar panels installed in 2025 produce between 400 and 460 watts, based on thousands of quotes from the EnergySage Marketplace. But wattage alone doesn't tell the whole story. In fact, efficiency matters more than wattage when comparing solar panels—a higher wattage can simply mean that a panel is larger.
