## Solar panel roof loading

## Overview

---

Does a solar roof have a snow load?

If you live in an area where winter weather is frequent, it's important to account for the snow load when factoring in if solar will fall within the roof's available capacity. The blueprints of your house will typically list your snow load capacity, but structural engineers can also assess your roof's snow load as well.

How to install solar panels on a roof?

Place inverter. It is recommended when installing solar panels to keep the distance from the inverter as small as possible. They should also not be too close to the edge of the roof because of weather conditions such as storms and high winds. Keep any obstacles in mind, trees or the chimney can cause shadows. Support structure.

What is a typical roof load?

A typical roof is expected to support a live load of 20 psf; this minimum live load is in addition to the dead load that the roof must bear. When wind hits the exterior wall of a building, the wind's energy disperses upward and downward along the wall.
