

Solar panel rooftop breeding greenhouse

Overview

Can you put solar panels on a greenhouse roof?

Putting solar panels on the greenhouse roof can block light needed for growing or heating. If a greenhouse is large enough, like the 3,000 sq. ft. greenhouse at The Golden Hoof Farm (Figure 1), there can be enough roof space to accommodate solar panels.

What is a solar-powered greenhouse?

Solar-powered greenhouses can utilize renewable solar energy to provide the greenhouse with power and maintain a comfortable environment for plant growth. Even if the weather outside the greenhouse is less than ideal for plant growth, a solar greenhouse's controlled internal environment can be tailored explicitly for successful growth.

How do greenhouse solar panels work?

Greenhouse solar panels work like regular panels, capturing sunlight and converting it into usable energy. If your greenhouse incorporates solar panels, you can use the electricity they produce to power a wide range of devices to keep your plants happy all year round. A solar-powered greenhouse offers numerous benefits for growing plants and crops.

Should you install a solar-powered energy system for your greenhouse?

The initial cost of installing a solar-powered energy system for your greenhouse can be significant, but the long-term savings it provides can't be ignored. Using renewable energy sources to power your greenhouse can significantly reduce your monthly energy costs.
