## Overview

What is a solar power booster?

The EverForce Solar Power Booster is designed to increase the output of a Photovoltaic (PV) panel by an average of 45%, thus significantly increasing the overall output of a PV system. The Solar Power Booster is compatible with all commercially available PV panels used in small (household), medium (commercial), and large (solar farm) PV systems.

Which solar panels are compatible with the EFE power booster?

The EFE Power Booster is compatible with all PV panels on the market and is ideal for both roof-top and ground PV systems for residential, commercial, or large- scale solar farm applications. The EFE Power Booster can be integrated into new PV systems or easily retrofitted into existing installations.

How to manage a solar PV system?

Determine how to arrange the panels in terms of the number of series-connected strings and the number of panels per string to achieve the required power rating. Implement the maximum power point tracking (MPPT) algorithm using boost converter. Operate the solar PV system in voltage control mode.

How to operate solar PV system in voltage control mode?

Operate the solar PV system in voltage control mode. Select a suitable proportional gain and phase-lead time constant for the PI controller, . The DC load is connected across the boost converter output. The solar PV system operates in both maximum power point tracking and de-rated voltage control modes.

### Solar PV System with MPPT Using Boost Converter

Solar PV System with Mppt Using Boost ConverterSolar Plant SubsystemMaximum Power Point TrackingIntermediate Boost DC-DC ConverterThis example uses a boost DC-DC converter to control the solar PV power. The boost converter operates in both MPPT mode and voltage control mode. The model uses the voltage control mode only when the load power is less than the maximum power that the solar PV plant generates, given the incident irradiance and panel temperature.
