Overview

What is a goodwe solar roof tile?

The GoodWe Sunshine Series is an integrated solar roof tile solution for pitched rooftops to replace traditional solar panels and framework for a sleek, aesthetically-pleasing result, that also maximises your rooftop space for more solar production. The integrated tempered double-glass structure ensures the safety of the roof structure.

Can solar roof tiles produce energy?

Research has shown its promise, with firms like Tesla developing solar roof tiles capable of producing up to 22 W per square foot under ideal circumstances. Simultaneously, TGA tiles exploit energy from thermal differentials, often using the Seebeck effect to transform heat gradients into electrical energy.

Do solar tiles reflect solar energy?

The average reflectance of 0.8 is slightly below the optimum, indicating that the tiles can reflect a significant amount of solar energy, but there is still space for improvement. Solar absorptance, a complementary measure to reflectance, quantifies the amount of solar energy absorbed.

What are the characteristics of solar tiles?

The tiles exhibited exceptional material characteristics, with a solar absorption coefficient of 0.256, solar reflectance of 0.81, and thermal emissivity of 0.86, enabling efficient temperature management and energy capture.
