## Overview

Are LiFePO4 batteries good for solar applications?

LiFePO4 batteries, renowned for their long cycle life, high energy density, safety, and environmental friendliness, have proven to be an ideal complement to solar systems. This article delves into the various aspects of LiFePO4 batteries in solar applications, exploring their working principles, benefits, challenges, and future prospects.

How much does a LiFePO4 battery weigh?

The company says its newest product uses 700-Ah lithium iron phosphate (LiFePO4) cells in a liquid-cooled 1,500 to 2,000-volt configuration that's good for nearly 16,000 charge cycles that all fits in half a normal shipping container. All in, the system weighs about 55 tons (50 tonnes).

Where do you store solar energy?

China leads the world in terms of renewable energy resources like solar power. And not just by a small margin either, making over twice as much solar power as the next highest country, the USA. Where do you store any excess solar energy for use when the sun isn't shining?

Answer: in ridiculously big batteries.

Are LiFePO4 batteries safe?

While LiFePO4 doesn't have the same inherent risks of "venting" as do the much more common lithium-ion (Li-ion) batteries, Envision's energy storage unit features a pretty robust six-tiered suite of safety features.
