

# Tbilisi's \$1.6 billion solar power project

## Overview

---

How big is solar energy investment in 2024?

Both in terms of volume and share, this is far below the amounts that are required to ensure full access to modern energy and to meet rising energy demand in a sustainable way. Power sector investment in solar photovoltaic (PV) technology is projected to exceed USD 500 billion in 2024, surpassing all other generation sources combined.

Will NRG Energy repurpose a solar power plant in 2026?

Just over a decade later, it's closing. The plant's co-owner NRG Energy announced in January it was unwinding contracts with power companies and, subject to regulatory approval, would begin closing the plant in early 2026, readying the site to potentially be repurposed for a new kind of solar energy.

Should government invest in photovoltaics?

One of President Donald Trump's first actions was to pause approvals of new renewable energy projects on federal land. But renewable energy experts say it's important for governments to invest in a range of clean technologies, and many of those they have invested in, such as photovoltaics, have worked out.

How much will Global Grid spending be in 2024?

After stagnating around USD 300 billion per year since 2015, spending is expected to hit USD 400 billion in 2024, driven by new policies and funding in Europe, the United States, China, and parts of Latin America. Advanced economies and China account for 80% of global grid spending.
