

The solar panel connection is completed and the voltage is zero

Overview

A faulty inverter or charge controller are the most likely reasons for a solar panel to register no voltage. What causes a solar panel to register no power?

These are actually common problems and there are ways you can fix them. A faulty inverter or charge controller are the most likely reasons for a solar panel to register no voltage. Other possible reasons for low to zero power are a damaged PV module, poor wiring, shading and temperature higher than the ideal operating range.

Why isn't my solar panel producing voltage?

If your solar panel is not producing voltage, it could be due to issues with the solar charge controller. If the charge controller displays errors, zero power, or freezes, it might cause a no voltage problem. To fix it, try a soft reset first. If that doesn't work, proceed with a hard reset. Many electronic devices, including solar charge controllers, often benefit from a restart.
