

# **The tallest solar curtain wall building**

## Overview

---

Deemed to be the nation's biggest photovoltaic glass curtain wall on a single building, the HanWall project at China Pharmaceutical International Innovation Park (PIIP) has hit the list of top landmark green buildings of Nanchang city. What is a curtain wall design strategy?

The proposed curtain wall design strategy suggested addressing 85% of the negative 4.5 KPa with a standardized segmented unitized system that is uniform throughout the building's exterior glass wall.

What is the tallest building in China?

The Shanghai Tower, soaring to 632 meters in height, is perhaps best known for being the tallest building in China, and the second tallest building in the world but it is so much more than just tall.

What is a curtain wall – wall a?

The main support for the Exterior Curtain Wall – Wall A is a horizontal ring beam consisting of a horizontal pipe 356mm in diameter laterally supported, at 10 meters on center in zone 2, and 7 meters on centre in zone 8 by a radial pipe strut support. This variation is a result of the geometry that included tapering and rotation of the tower.

What is the maximum differential pressure between curtain panels?

At the same time, the highest instant differential pressure between two subsequent curtain panels on the exterior wall can reach +/-1.5 KPa in either horizontal or vertical direction. Interior curtain wall cladding loads were at 2.1 KPa.
