# Tunisia thin film solar panels

## Overview

---

What are thin-film solar panels?

Thin-film solar panels are a type of photovoltaic (PV) panel that is made by depositing a thin layer of photovoltaic material, such as amorphous silicon, cadmium telluride (CdTe), or copper indium gallium selenide (CIGS), onto a substrate, such as glass, metal, or plastic.

How are thin film solar panels made?

Thin film solar panels, also called thin film photovoltaic solar panels, are made by depositing one or more layers of photovoltaic material onto a substrate like glass, plastic, or metal. These layers are incredibly slim, around 1 micron (1 $\mu$ m) compared to 300 microns in traditional silicon wafers.

Are thin film solar panels sustainable?

Manufacturing thin film panels generates approximately 50% fewer carbon emissions than conventional silicon-based panels. For those prioritizing sustainability in solar adoption, thin films offer a greener production footprint which makes them a preferred choice for eco-conscious builders and projects seeking LEED or green certification. 3.

What is a thin film solar cell?

This is the oldest and most basic type of thin film solar cell. It's lightweight, flexible, and affordable, making it ideal for small electronics like calculators, solar-powered watches, and portable devices. However, its lower energy conversion rate means it's not suitable for larger energy needs.
