## Overview

---

Can network energy saving technologies mitigate 5G energy consumption?

This Technical Report explores how network energy saving technologies, such as carrier shutdown, channel shutdown, symbol shutdown etc., that have emerged since the 4G era, can be leveraged to mitigate 5G energy consumption.

Does 5G cost more energy than 4G?

A report from Global System for Mobile Communications Association (GSMA) about 5G network costs suggests up to 140% more energy consumption than 4G . Energy saving measures in mobile network operators (MNOs) are prioritized as needs rather than measures that are nice-to-have.

Can smartmme optimize base station energy usage?

The proliferation of User Equipment ( UE) drives this energy demand, urging 5G deployments to seek more energy-efficient methodologies. In this work, we propose SmartMME , as a pivotal solution aimed at optimizing Base Station (BS) energy usage.

Can network energy saving technologies reduce 5th generation energy consumption?

This Technical Report explores how network energy saving technologies that have emerged since the 4th generation of wireless networks (4G) era, such as carrier shutdown, channel shutdown, symbol shutdown, etc., can be leveraged to mitigate 5th generation of wireless networks (5G) energy consumption.
