

# **Tuvalu New Energy and New Energy Storage**

## Overview

---

Will Tuvalu achieve 100% renewables by 2030?

The pacific island nation of Tuvalu is on track to achieving its goal of 100% renewables by 2030, with the recent commissioning of a 500 kW rooftop solar project and 2 MWh battery energy storage system in it's capital Funafuti. Image: United Nations Development Programme Pacific Office.

Why does Tuvalu need a solar project?

This solar project echoed Tuvalu's action during COP15 and sent a symbolic message about the importance and necessity of global and concerted actions worldwide to promote renewable energy and mitigate climate change impacts to save threatened countries. However, the majority of Tuvalu's energy sources are imported fossil fuels.

What is Tuvalu's energy supply?

In 2021, fossil fuels accounted for 96 percent of Tuvalu's total energy supply, while solar and other renewable energy sources accounted for 4 percent. Tuvalu's economy is therefore highly vulnerable to fuel prices' volatility, which is why it is critical to find alternative sources of energy for the country's electricity supply.

Is Tuvalu a sustainable country?

With a total land area of just 16 square miles and a population of approximately 11,733, Tuvalu faces significant challenges in ensuring its sustainability and survival. In response to these threats, the country has emerged as a leader in promoting renewable energy, aiming for 100% of its electricity generation to come from renewable sources.
