

# Types of solar container battery cells

## Overview

---

There are four types of solar batteries: lead-acid, lithium-ion, nickel cadmium, and flow batteries. The most popular home solar batteries are lithium-ion. What type of batteries are used for solar energy storage?

Lead-acid batteries are the traditional option for solar energy storage. They are widely available, inexpensive, and have been used for decades. Lead-acid batteries work by using lead plates and sulfuric acid to store energy. These batteries are often used for off-grid solar systems or backup storage.

What are the different types of solar batteries?

Solar batteries can be divided into six categories based on their chemical composition: Lithium-ion, lithium iron phosphate (LFP), lead-acid, flow, saltwater, and nickel-cadmium. Frankly, the first three categories (lithium-ion, LFP, and lead-acid) make up a vast majority of the solar batteries available to homeowners.

What type of battery should I use for my solar system?

Although you could get a Ni-Cd battery or a flow battery to pair with your solar system, lithium ion and lead acid are the go-to solar batteries for a reason. To find out which type of solar battery will best meet your needs, you should call local solar installers.

What are the different types of rechargeable solar batteries?

The six types of rechargeable solar batteries include lithium-ion, lithium iron phosphate (LFP), lead acid, flow, saltwater, and nickel-cadmium.
