

UPS uninterruptible power supply requires three-phase electricity

Overview

With three times the power of a single-phase Uninterruptible Power Supply (UPS), 3-phase UPS is the most efficient way to deliver power to data centers or industrial applications for load levels typically higher than 10-20 kW. What is a three phase uninterruptible power supply (UPS)?

Three phase uninterruptible power supplies (UPS) operate in conjunction with existing electrical systems to provide power conditioning, back-up protection, and distribution for electronic equipment loads that use three phase power.

What is a three phase UPS system?

A three phase supply will deliver more and higher constant electrical power than a single phase power supply, making the three phase standalone UPS system an ideal choice to protect larger applications such as communication rooms, data centers and switch rooms, industrial manufacturing plants and more.

What is the voltage of a 3 phase UPS?

Three phase voltage is 415V. These UPS systems regulate both voltage and frequency to maintain stable and consistent power output, protecting sensitive equipment from fluctuations or disturbances in the electrical supply. Three phase UPS are available in either monolithic or modular topologies.

What is a 3 phase power supply?

It's a modular three phase power supply with the ability to expand as needed. Choose a three phase power supply system from 10kVA to 2000kVA to distribute industrial power over long distances.
