# USA New York Power Grid Energy Storage Equipment Project

## Overview

---

What is the northern New York energy storage project?

"The completion of the Northern New York Energy Storage project marks an important step to reaching New York's energy storage and climate goals." The project, located in Chateaugay, about 40 miles northwest of Plattsburgh, is the Power Authority's first utility-scale battery project and the first one built by New York State.

Where is New York's first state-owned battery energy storage project located?

Governor Kathy Hochul today announced that New York's first state-owned utility-scale battery energy storage project is now operating in the North Country's Franklin County.

How will energy storage help New York's energy grid?

As New York electrifies buildings, transportation and industrial end uses, accelerating energy storage deployment will provide a flexible solution to help meet these additional demands on the grid and support the retirement of downstate fossil fuel generators near their end of life.

What is the New York Power Authority's 20-megawatt power plant?

The 20-megawatt facility installed and operated by the New York Power Authority connects into the state's electric grid, helping to relieve transmission congestion and pave the way for the utility industry and the private sector to better understand how to integrate more clean energy into the power system, especially during times of peak demand.
