

# Unauthorized shutdown of solar container communication station power supply

## Overview

---

Are hidden communication devices in Chinese-manufactured solar panels a threat?

Recent findings have uncovered hidden communication devices within Chinese-manufactured solar panels, sparking serious concerns over the security of national power grids.

What happens if a power system is unauthorized?

According to security experts familiar with the matter, these unauthorized components create secondary communication channels that may allow remote access to critical energy infrastructure without detection, potentially enabling foreign actors to manipulate or disrupt power delivery systems.

Are Chinese solar power inverters connected to critical infrastructure grids?

U.S. energy officials have launched an investigation after discovering unauthorized communication equipment embedded within Chinese-manufactured solar power inverters connected to critical infrastructure grids across the country.

Do solar inverters contain undocumented cellular radio devices?

These inverters, which are essential components that convert direct current from solar panels into alternating current usable by the electrical grid, were found to contain undocumented cellular radio devices not disclosed in product specifications or technical documentation.
