

What is the POC access point for energy storage projects

Overview

Can a building be built over a point of connection (POC)?

No building works shall be permitted to build over or within 1.5 m of access chambers or Points of Connection (POC). Core and Shell Points of Connection (POC) and all existing MEP utilities will be verified by individual contractors prior to modeling.

What is a point of connection (POC)?

Originally, a traditional solution involving a replacement 132kV tower was planned as the Point of Connection (POC). This approach would have required a temporary diversion of the Overhead Line (OHL) to facilitate the new tower being built - a time-consuming and costly process.

What is totalization at points of connection (POC)?

Article 10.7 of the currently approved Terms and Conditions deals with totalization at Points of Connection (POC) defined as a point at which electric energy is transferred between the Customer's facility and the AIES. No building works shall be permitted to build over or within 1.5 m of access chambers or Points of Connection (POC).

What is a solar power interconnection (POI)?

In utility scale in solar projects, the POI is a point of interconnection for clean energy into the grid. A well-integrated POI means that the project is set to operate within the set requirements and provisions, operate safely and provide power effectively.
