# What is the voltage of solar panels connected in series

## Overview

---

Sometimes the system voltage required for a power plant is much higher than what a single PV module can produce. In such cases, N-number of PV modules is connected in series to deliver the required volt.

Why do solar panels need to be connected in series?

Putting panels in series makes it so the voltage of the array increases. This is important because a solar power system needs to operate at a certain voltage for the inverter to work properly. So, you connect your solar panels in series to meet the operating voltage window requirements of your inverter.

What if two solar panels are connected in series?

So, if you connect two solar panels with a rated voltage of 40 volts and a rated amperage of 5 amps in series, the voltage of the series would be 80 volts, while the amperage would remain at 5 amps. Putting panels in series makes it so the voltage of the array increases.

What is a series connection solar panel?

**Definition:** In a series connection, solar panels are linked end-to-end, where the positive terminal of one panel connects to the negative of the next. **Effect on Voltage:** Adds up (e.g., two 12V panels = 24V total). **Effect on Current (Amps):** Stays the same as a single panel. Best for increasing system voltage.

Do solar panels need series wiring?

**Off-Grid Applications Where Voltage is Crucial:** Off-grid solar systems, where you need to store energy for later use, also benefit from series wiring since it provides the necessary voltage to charge batteries efficiently. **What Does it Mean to Wire Solar Panels in Parallel?**

Parallel wiring is another common method of connecting solar panels.
