# What power source does the base station use

## Overview

---

Do base stations need a power supply?

**Power Supply:** Base stations require a stable and reliable power supply to operate. Many base stations have backup power sources like batteries or generators to ensure continuous operation in the event of a power outage.

What is base station Power?

Base station power refers to the output power level of base stations, which is defined by specific maximum limits (24 dBm for Local Area base stations and 20 dBm for Home base stations) and includes tolerances for deviation from declared power levels, as well as specifications for total power control dynamic range. How useful is this definition?

Why do base stations have backup power sources?

Many base stations have backup power sources like batteries or generators to ensure continuous operation in the event of a power outage. **Backhaul:** The backhaul is the connection between the base station and the central network (often a mobile switching center or a core network).

What is a solar-powered base station?

A solar-powered base station as shown in Fig. 5.14 consists of a PV powering unit, a base station and a cooling unit. The base station uses radio signals to connect devices to network as a part of traditional cellular telephone network and solar powering unit is used to power it.
