## Overview

---

Are lithium-ion batteries a viable energy storage system?

That cost reduction has made lithium-ion batteries a practical way to store large amounts of electrical energy from renewable resources and has resulted in the development of extremely large grid-scale storage systems. These modern EES systems are characterized by rated power in megawatts (MW) and energy storage capacity in megawatt-hours (MWh).

What is the world's largest lithium-ion battery?

Currently the world's largest lithium-ion battery, the Moss Landing project in California has a mammoth capacity of 1,600 MWh – about 3.5 times larger than its next biggest rival. To put that in perspective, Moss Landing can provide enough electricity to power over 1 million Californian homes for 4 whole hours when discharging at max capacity!.

How much does battery storage cost?

An alternative is to store the energy electrochemically in batteries. For a long time, the cost of battery storage of renewable energy was considered prohibitive. Indeed, a decade ago, the price per kilowatt-hour (kWh) of lithium-ion battery storage was around \$1,200.

What is China's largest non-lithium battery?

China's massive Dalian flow battery is the largest non-lithium battery in the world with a whopping 400 MWh capacity. That's enough to meet the average daily electricity needs of over 130,000 Chinese households!
