

# Which inverter should be used in the factory for 250kw

## Overview

---

Which Power Inverter should I buy?

The POTEK 500W is an ideal option for buyers looking at car-friendly power inverters to power a slew of electronics and handheld devices. This inverter and its dual 110V AC outlets and two USB ports will have no problem keeping a laptop, Kindle, iPad, or multiple smartphones going with power to spare.

How much power does a power inverter use?

Power inverters vary widely in wattage, from 300W to 3,000W and up. Some can even generate surge power as high as 6,000W. Most power inverters have two standard AC outlets for various electronic devices. Other models offer additional AC outlets and often USB ports to charge all of your devices—from laptops to fans and flood lights.

Which Power Inverter should I buy for my RV?

TL;DR: The Ampeak works with everything from cellphones and digital cameras to floodlights and microwaves. If you're looking for a portable power inverter to use on your next RV trip, the AMPEAK 2,000-watt power inverter could be the perfect pick.

Can a 5 kW inverter power a battery?

Yes, a 5 kW inverter capacity means you can't draw more than 5 kW out of either the battery or solar at one time, but most residents shouldn't need to. Hybrid inverters are not compatible with all batteries. You could argue that AC coupling has the same issue, but you're not going to purchase a battery inverter now for a battery down the track.
