Which sodium sulfur battery energy storage container is best in Tbilisi

Overview

Are rechargeable room-temperature sodium-sulfur (Na-S) batteries suitable for large-scale energy storage?

Rechargeable room-temperature sodium-sulfur (Na-S) and sodium-selenium (Na-Se) batteries are gaining extensive attention for potential large-scale energy storage applications owing to their low cost and high theoretical energy density.

What is a high temperature sodium sulfur battery?

High-temperature sodium-sulfur (HT Na-S) batteries were first developed for electric vehicle (EV) applications due to their high theoretical volumetric energy density. In 1968, Kummer et al. from Ford Motor Company first released the details of the HT Na-S battery system using a β'' -alumina solid electrolyte .

What is a sodium-sulfur battery?

Sodium-sulfur (Na-S) batteries are typical high-temperature batteries, which use sodium and sulfur as the active materials for the anode and cathode, respectively, with Al_2O_3 serving as the solid electrolyte and separator 92 (Fig. 4d).

What is a standard NaS battery container?

A standard single NAS battery container has 1.45 MWh energy capacity. The containers are stackable, enabling utility scale energy storage systems. We supply containerized NAS battery systems: one standard 20-ft container has 1.45 MWh energy capacity. The compact form enables easy transportation and quick installation at our customers' sites.
